Accepted XXX. Received YYY; in original form ZZZ

Multi-frequency (radio and infrared) image cutouts and radio-frequency spectral energy distributions of the 79 remnant candidates are shown in Figs. S1 to S79.

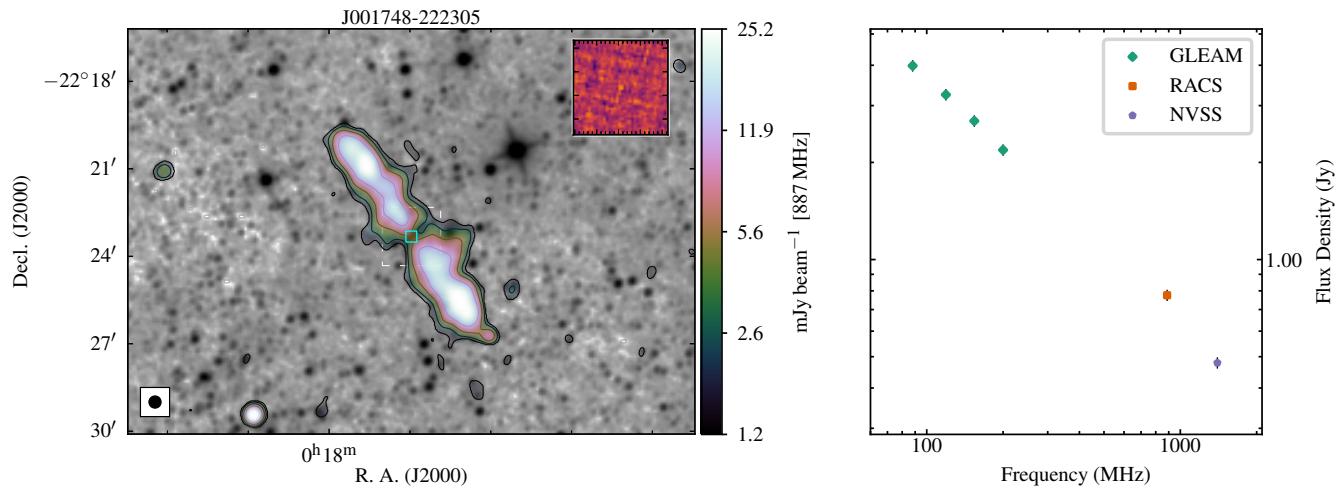

Figure S1. *Left:* The 887 MHz image of J001748-222305 is overlaid onto a WISE W1-band background with a logarithmic stretch. Radio contour levels are specified by the on the right-hand colour bar and the identified host galaxy is marked with a cyan square. The inset in the upper-right corner provides a VLASS view of the region bounded by the dashed box. *Right:* The integrated radio flux density of the source from GLEAM, RACS and NVSS observations (green, orange and purple, respectively).
